

Mechanical Engineering

Index of 2002 Articles

FEATURE ARTICLES BY AUTHOR

Allen, Gene

Fast and Virtual Eight experts from three companies network their skills to land a rocket engine in record time. *Mechanical Engineering Design*, March, pages 18-20.

Andersen, John A., et al

Tighter Air Control A sophisticated operating system, combining currently available technologies, may be a key step toward greater safety in the skies. July, pages 38-41.

Baumgartner, Henry

Pick Up Another Boat The practice of dry-stacking has become increasingly popular for larger craft, leading to the need for ever-larger lifts. *Mechanical Engineering Design*, March, pages 26-27.

Brown, Alan S.

SCADA vs. The Hackers Can freebie software and a can of Pringles bring down the U.S. power grid? December, pages 37-40.

Chalmers, Peggy

Raising the Kursk A Dutch team, racing against the weather, engineered the salvage operation that let the Russians take home their dead. May, pages 52-55.

Cheng, Andrew

Lightning Plays the Stadium Grounding a giant structure through its steel isn't so simple when the roof is made of moving parts. February, pages 60-61.

Note: This year's listings incorporate the *Mechanical Engineering Design* and *Mechanical Engineering Power* supplements.

Chuck, Chen and Douglas R. McCarthy

Where the Plumes Go Controlling hot exhaust—with the aid of CFD—is one of the critical design elements in airplane construction. October, page 57.

DeGaspari, John

All in the Family Flexible machining systems give manufacturers a hedge on their bets. February, pages 56-58.

Hot Stuff Advanced materials are moving out of the lab and into the commercial world. December, pages 32-35.

Long-Haul Endurance Lasers are being investigated as a way to uncover tiny imperfections in crucial ceramic components of diesel engines. August, pages 50-51.

MEMS' Rocky Road Taking a design from concept to high-volume production can be a bumpy ride. June, pages 38-41.

Nukes and Rubber A tire manufacturer taps into computational methods developed to study the readiness—and safety—of the U.S. nuclear arsenal. November, pages 54-56.

Rapid Evolution New materials and process improvements are stretching the boundaries of prototyping techniques. March, pages 48-52.

Risky Business Practitioners say that the techniques for managing industrial risk also protect the bottom line. July, pages 42-44.

Howell, Larry L. and Timothy W. McLain

A Little Push When machine dimensions run in millionths of a meter, a tiny movement could go a long way. October, pages 58-59.

Risky Business Practitioners say that the techniques for managing industrial risk also protect the bottom line. July, pages 42-44.

Howell, Larry L. and Timothy W. McLain

A Little Push When machine dimensions run in millionths of a meter, a tiny movement could go a long way. October, pages 58-59.

Hutchinson, Harry

For a Clean Burn An energy co-op in a leading coal state will try a CFB. *Mechanical Engineering Power*, June, page 56.

Heavy-Duty LNG Designers are taking most of the diesel out of the cycle. May, page 59.

Juice From Water Hydroelectric refittings aim to squeeze new power out of old plants. November, pages 58-59.

Old King Coal It generates more than half the electricity in the U.S., and so much is lying in the ground. The trick is to use it without killing all the fish in Canada. August, pages 41-45.

Langston, Lee

Electrically Charged Demand from new power plants drives gas turbines into another record year. *Mechanical Engineering Power*, June, pages 50-52.

Lieuwen, Tim and Keith McManus

That Elusive Hum Research is uncovering clues to the oscillations that trouble gas turbines, but the mystery is far from solved. *Mechanical Engineering Power*, June, pages 53-55.

Marshall, Donald J.

Transition Engineering U.S.-funded programs rely on experienced professionals to help companies design processes for economic change. October, pages 54-56.

Mechanical Engineering Special Report

Technology vs. Terrorism Some of the best engineering brains offer antidotes in the wake of the Sept. 11 attacks. January, pages 48-52.

Mechanical Engineering Staff

Designed for Time Eliminate five screws, save 40 seconds, multiply by 10 million: A computer's new development path pays off. September, pages 54-55.

Diesel Breeding Looking into engines helps cross the best with the best. September, page 53.

Field Work Smoothing the ride aims to get more out of the tractor. November, page 53.

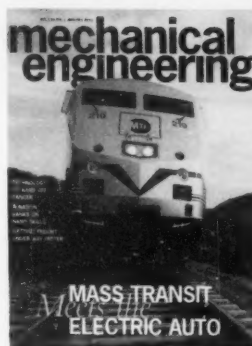

Ground Testing From lab samples to computer models, research uncovers secrets of blast waves and how to use—or resist—them. August, pages 52-53.

Heat Exhaustion A team tries to predict how well a new refinery valve will stand up to its punishment. July, page 50.

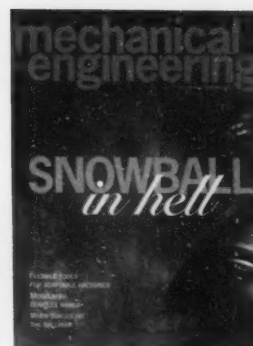

Helping Hands A robot's touch may have the power to restore lost motor skills. December, page 46.

Light Work A laser catches what the eye can't see in a truck lamp. December, page 41.

Narrow Opening A smoke-venting plan satisfies fire officials and saves big bucks on a restaurant restoration project.

January

February

March, pages 58-59.

A Plastic Jug of Water When a neutrino observatory needed a 40-foot acrylic vessel to hold tons of D₂O, the builders had to do their homework. April, pages 50-53.

Playing for Keeps Designers of a new tape backup format first had to prove that they could get all the data to line up. July, page 49.

Predicting Bubbles Research to understand cavitation aims to advance the fuel and oxygen pumps in the space shuttle. *Mechanical Engineering Power*, June, page 60.

Quick on the Uptake Examining a boiler's pipeline becomes the job of an afternoon. December, page 36.

Tweaking Hawkeye Before you can change the Navy's early-warning aircraft, someone has to see how the idea will fly. September, page 56.

Mitiguy, Paul

Input/Output Dark, Dank, and Dismal. October, page 88.

Pak, Y. Eugene

A Bid to Take the Lead Seeking to assure the prosperity of one of its key industries, Korea sees a future measured in nanometers. January, pages 56-58.

Papazian, John M.

Tools of Change Reconfigurable forming dies raise the efficiency of small-lot production. February, pages 52-55.

Raplee, Jack

Captain Nemo's Revenge Engineers are working with acrylic to introduce tourists and vacationers to the wonders of the deep. *Mechanical Engineering Design*, March, pages 23-25.

Reisz, Aloysius I.

Earthrise When the leadership of Apollo reached for the moon, it raised a new set of engineering issues for us back here at home. May, pages 42-46.

March

April

Sharke, Paul

Better Storage Through Chemistry One company has come up with another way of holding hydrogen. February, pages 40-43.

Brawn + Brains > 1 Having acquired muscle and grace, machine tools begin wising up. September, pages 46-49.

Making a Clean Getaway Battery-powered electric vehicles are forming a symbiotic relationship with commuter rail. January, pages 37-41.

No Turn of the Screw Taking them out isn't always easy. December, pages 42-45.

Power of 42 Higher automotive voltages may one day empower a car full of drive-by-wire applications and amenities. The car could save gas, too. April, pages 40-42.

Seeing Eye to Eye Surprise! An engineer's particular way of looking at things isn't everyone's. *Mechanical Engineering Design*, March, pages 6-10.

The Start of a New Movement A NASA invention is one of several poised on the brink of commercialization. But it needs outside help to get there. August, pages 47-49.

Ticket to Ride High-speed maglev trains hover within reach of the United States, as China puts one on the ground. October, pages 46-50.

Skakoon, James G.

Professionally Speaking Rules Are Made to Be February, page 26.

Smith, Emily M.

Designing for Sabotage In the forest of possibility for mechanical failure, a new kind of tree takes root. September, pages 40-44.

Teamwork With the Next Generation A playful take on robots draws students to technology, and gives engineers unexpected insights into their work and themselves. June, pages 46-49.

Thilmany, Jean

CAD Jockey or Engineer? Defining the designer's role at the computer is especially difficult during a time of flux. *Mechanical Engineering Design*, March, pages 11-13.

Changing Times Outsourcing and consolidation provide new reasons for collaborating across distances. August, pages 38-40.

FEA Finds Its Place Engineers examine innovative ways to fold analyses into their design cycles. October, pages 51-53.

Keeping in Touch A product doesn't just disappear into the ether after design; it leaves tracks to follow in the real world. September, pages 50-52.

More Than One Force of Nature With multiphysics technologies, engineers can examine many influences in one simulation. February, pages 49-51.

Organ on the Wall An English doctor consults a four-foot, sliceable, movable image of a patient's liver while operating on the real thing. November, pages 50-52.

Probabilistic Problem Solving Predictive technologies return uncertain answers—and that's the difference. January, pages 53-55.

Smooth Operator Finite element analysis helped Boeing eliminate oiled bearings on its Chinook helicopter. July, pages 46-48.

Stepping Up CFD Fluid simulations see an ever-wider board of applications to cross. April, pages 47-49.

Supply Channels Big and small manufacturers say that technology can be a key to teamwork, but a few critical issues give them pause. May, pages 56-58.

What Does It Mean? It's not enough to gather information. You have to make sense of it, too. June, pages 42-44.

Ullman, David G.

Team Decisions Seven heads are better than one, but it takes a lot of care and nourishing to keep group dynamics on track. *Mechanical Engineering Design*, March, pages 15-17.

Valenti, Michael

Building It Better Advanced alloys, plastic, and automated controls are speeding the production and raising the quality of manufactured goods. March, pages 54-57.

Conservative Powers Automated comfort controls and new lighting systems aim to cut electricity costs and reduce pressure on the grid. *Mechanical Engineering Power*, June, pages 57-59.

Fill 'er Up—With Hydrogen Researchers are developing new technologies to carry H₂ in gas, liquid, or solid state. February, pages 44-48.

Improving Pool Safety A tragedy inspired the design of a drain cover to prevent drowning and injuries. *Mechanical Engineering Design*, March, pages 21-22.

Reaching for 60 Percent The General Electric H turbine system taking shape in Wales is making a bid for a new record in thermal efficiency. April, pages 35-39.

Speed for Uncle Sam's Cargo A spreader bar designed to transfer military cargo directly from railcars to ships also benefits civilian freight handling. January, pages 42-46.

Teaching Rover New Tricks Deepwater vehicles are shedding weight and adding capabilities to extend their reach toward the world's energy stores. May, pages 47-51.

Weeding Without Sensorship This cutter is taking some of the labor out of caring for delicate grape vines. January, page 59.

Venneri, Samuel L., and Ahmed K. Noor

Plenty of Room in the Air Researchers seek to design a flexible aviation system accessible to all. November, pages 42-48.

Wicks, Frank

Where on Earth? It can guide emergency dispatchers or surveillance drones, and other applications are on the way; GPS has come a long way since Desert Storm. July, pages 34-37.

Wolcott, Barbara

Old School Ties When practicing engineers return to the university, theory gets a reality check. April, pages 44-46.

Woods, Robert O.

Drawing on Experience A CAD rendering is pretty, but the engineer needs to be in the picture. November, page 57.
